# Etape 5

The image shows a Linux desktop environment with a 'System' menu open. The menu items are: Desktop, System, Setup, Utility, Filesystem, Graphic, Document, Business, Personal, Network, Internet, Multimedia, Fun, Help, and Shutdown. The 'System' menu is expanded, showing: System Status and Config, BootManager configure bootup, Format floppy disk, GParted partition manager (highlighted with a blue arrow and a green star labeled '1'), Grub bootloader config, Grub4Dos bootloader config, Pdisk partition manager, Pschedule task on time, and Puppy Event Manager.

The GParted application window is open, displaying the following text:

Welcome, Gparted is an application to examine and modify partitions in a disk drive. At startup, the default behaviour is for Gparted to scan for all drives in the computer, and on some computers this can take a very long time. Therefore, this dialog window enables you to make a choice of which drive you want to work on (and Gparted will only scan that drive at startup).

WARNING: A PC may have a single VFAT or NTFS partition, with Windows installed, and you might want to decrease the size of that partition so as to be able to create a Linux partition. For Windows XP/98/95 this is usually ok (but be careful not to make it too small, say 5GB for XP). However, Vista gets very upset if the partition is resized and may not work properly afterward (in some cases won't even start) -- there may be a fix for this, but we don't know what it is.

sda internal drive. Descr: ATA VBOX HARDDISK (highlighted with a blue arrow and a green star labeled '2')

ALL DRIVES. Scan all drives at startup

# Etape 7

The screenshot shows the GParted application window titled "/dev/sda - GParted". The menu bar includes "GParted", "Edit", "View", "Device", "Partition", and "Help". The toolbar contains icons for "New", "Delete", "Resize/Move", "Copy", "Paste", "Undo", and "Apply". The main area displays a disk layout with a "New Partition #2" of 7.50 GiB. A warning dialog box titled "Apply operations to device" is overlaid on the window, containing the following text:

**Are you sure you want to apply the pending operations?**

Editing partitions has the potential to cause LOSS of DATA. You are advised to backup your data before proceeding.

Buttons:

# Etape 8

The screenshot shows the GParted interface for the device /dev/sda (8.00 GiB). The main window displays a list of partitions:

Partition	File System	Size
/dev/sda1	linux-swap	512.00
/dev/sda2	ext2	7.50

A context menu is open over the /dev/sda2 partition, with the 'Manage Flags' option selected. A blue arrow points to this option. A secondary dialog window titled 'Manage flags on /dev/sda2' is open, showing a list of flags with checkboxes:

- boot
- hidden
- lba
- lvm
- palo
- prep
- raid

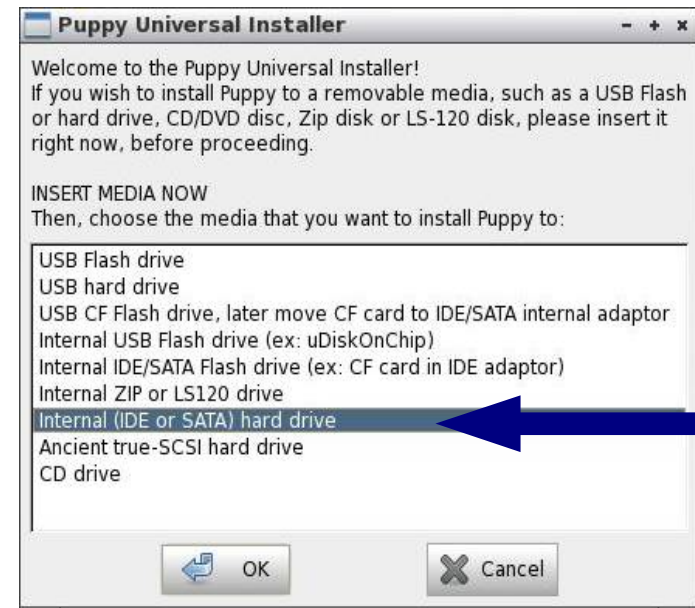

A blue arrow points to the 'boot' checkbox. The 'Close' button is visible at the bottom right of the dialog.

# Etape 9

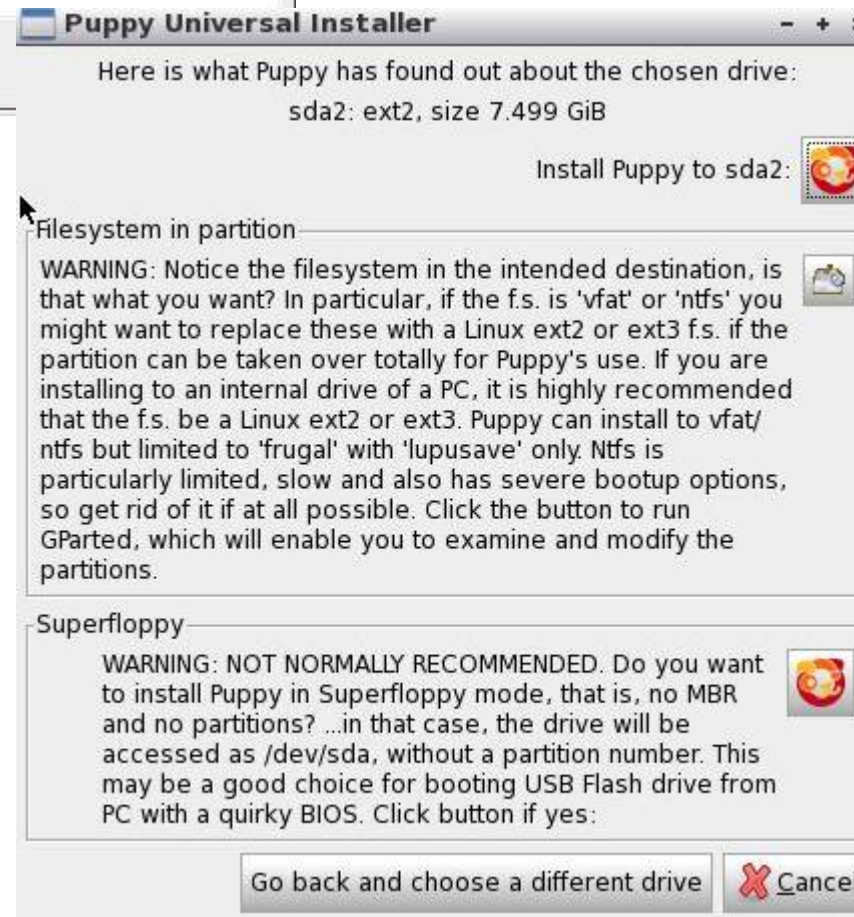

Partition	File System	Size	Used	Unused	Flags
/dev/sda1	linux-swap	512.00 MiB	---	---	
/dev/sda2	ext2	7.50 GiB	137.40 MiB	7.36 GiB	boot

18
```

**Puppy Universal Installer**

If all went well, Puppy has been installed to sda2.  
The text-editor window shows text that you can insert into the menu.lst file if you have GRUB or GRUB4DOS installed.

If your PC does not have GRUB, GRUB4DOS, LILO or any other boot manager installed, or you want to do a reinstallation, just click the 'OK' button to finish the Universal Installer, then go to the 'System' menu and run the GRUB or GRUB4DOS installer -- this will probe your PC, so you probably won't need the contents of the text-editor...

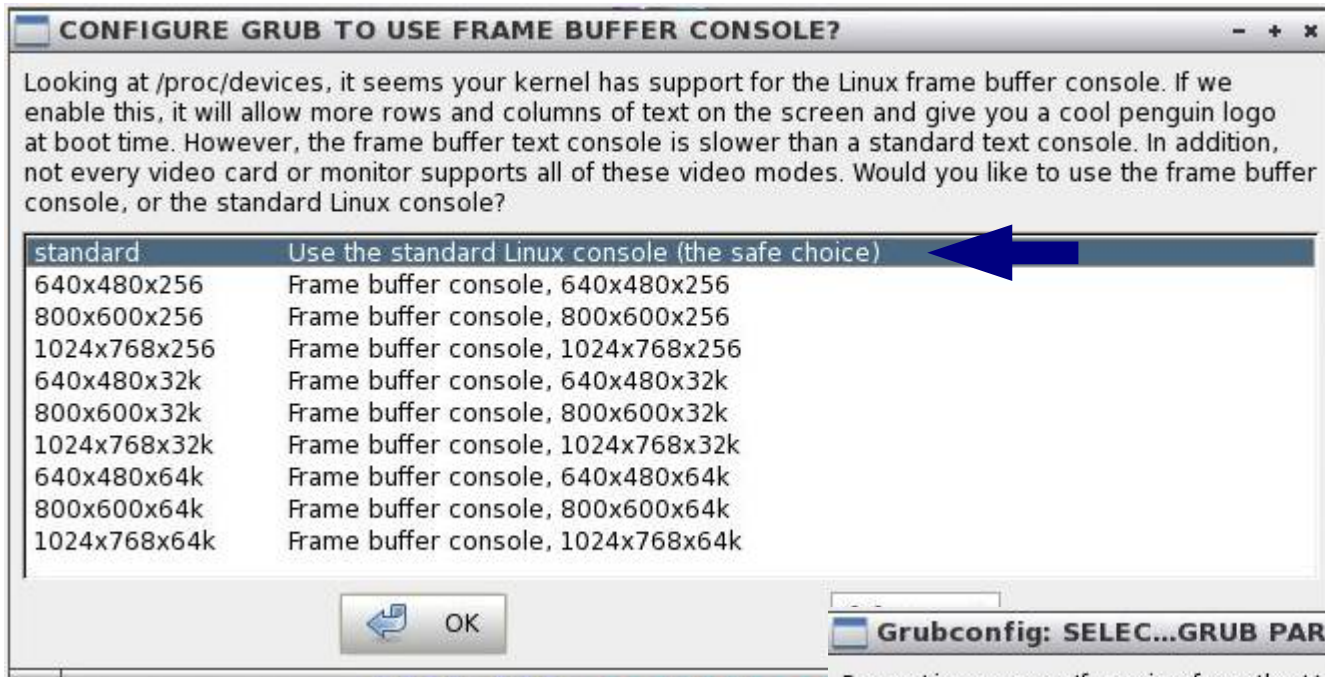

OK
